

## CSE 4502 (SWE) [Operating Systems Lab]

### Lab # 05

#### **Lab Task**

Consider the following set of processes, with the length of the CPU burst given in milliseconds:

Process	Burst Time	Priority	Arrival Time
<b>P1</b>	<b>13</b>	<b>3</b>	<b>2</b>
<b>P2</b>	<b>1</b>	<b>1</b>	<b>0</b>
<b>P3</b>	<b>2</b>	<b>3</b>	<b>1</b>
<b>P4</b>	<b>16</b>	<b>4</b>	<b>3</b>
<b>P5</b>	<b>7</b>	<b>2</b>	<b>5</b>

Calculate average waiting time and average response time for the followings:

- FCFS Scheduling
- Preemptive SJF Scheduling
- Non-preemptive SJF Scheduling
- Preemptive Priority Scheduling
- Non-preemptive Priority Scheduling
- Round Robin (quantum=4) Scheduling
- Multilevel feedback queue (quantum=4&8) Scheduling

**Output** (Print the output in the given format)

Non-preemptive SJF

P2 → P3 → P1 → P5 → P4:

P1:

Start Time – 3

Finish Time – 16

Response Time – 1

Waiting Time – 1

P2:

Start Time – 0

Finish Time – 1

Response Time – 0

Waiting Time – 0

.

.

.

Average Response Time – 6.4

Average Waiting Time – 6.4
